

*Since 1964, we have supported the Columbia Basin Project and its future development. We protect its water rights and educate the public on the renewable resource and multiple-purpose benefits of the project.*

**OGWRP Partners Celebrate Lind Coulee Siphon Complex Completion**

*Senator Judy Warnick, Representative Tom Dent, Representative Mary Dye, USBR’s Regional Director Lorri Lee, and WSDA Director Derek Sandison push the button raising the gate on the second siphon allowing water to flow. OCR Director Tom Tebb and Ecology Director Maia Bellon were also present (not pictured).*

On July 13, government officials, area landowners, members of the media, and other guests joined staff from East Columbia Basin Irrigation District (ECBID), Washington State’s Department of Ecology’s (Ecology) Office of the Columbia River (OCR), and the US Bureau of Reclamation (USBR) to celebrate the on-time completion of the Lind Coulee Siphon complex. As another cause for celebration, the project came in under budget by more than \$2 million.

The Lind Coulee Siphon construction project is just one part of the East Low Canal (ELC) expansion; improvements that will bring surface water to the Odessa Subarea. ELC expansion is just one element of the Odessa Ground Water Replacement Project (OGWRP), a public-private partnership between ECBID, Ecology, USBR, and landowners in the Odessa Subarea. By completing two siphons parallel to two operational siphons, the project provides greater capacity to deliver water to 17,700 additional farmed acres currently dependent on diminishing ground water.

Washington State Senator Judy Warnick from District 13, USBR’s Pacific Northwest Regional Director Lorri Lee, ECBID Board President and CBDL Board member Mark Booker, ECBID Board member and CBDL Board Chair Orman Johnson, Ecology Director Maia Bellon, OCR Director Tom Tebb, and Washington State Department of Agriculture (WSDA) Director Derek Sandison offered remarks to commemorate the event. Speakers attributed the milestone to the successful collaboration of OGWRP’s public and private partners.

*Orman Johnson*

July has been a month of celebration for the Columbia Basin Project. The Lind Coulee Siphon ceremony celebrated the completion of a significant project that

will bring irrigated water to four out of the seven water delivery systems within the Odessa Ground Water Replacement Project (OGWRP) through the increase in canal-carrying capacity and operational security. No place in the world can obtain yields like we do for a number of crops in the Columbia Basin. All we need is a certain supply of water. Thank you to all the organizations and agencies that have worked together in making it possible to deliver water to lands that will replace deep wells. It has been a long haul and challenging, but worth it. All future generations will be grateful for what is being accomplished.

Another reason to celebrate is

the ongoing and reliable delivery of water during these summer months in all three Columbia Basin Project irrigation districts due to the infrastructure built and maintained over the past 60-plus years. Let's never forget how much has already been accomplished.

In the midst of so much momentum and celebration, let's also pause and reflect on the legacy of leadership within the Columbia Basin Project that has gotten us this far. CSDL Award nominations for 2016 are now open. Read on to learn about the awards the League confers each year and then take a moment to submit a nomination.

**OGWRP Partners Celebrate Lind Coulee Siphon Complex Completion**

*Continued from page 1*

*WSDA Director Derek Sandison.*

*USBR Regional Director Lorri Lee.*

In his remarks on the lengthy process, WSDA Director Derek Sandison commented, "We had a lot of support along the way from the Columbia Basin Development League."

"We're proud to be part of the partnership that's delivering long-awaited surface water to our East Columbia irrigators who've encountered poor water quality and added expenses when faced with drilling deeper wells in the Odessa Subarea," said Lorri Lee, USBR's Pacific Northwest Regional Director.

## OGWRP Partners Celebrate Lind Coulee Siphon Complex Completion *Continued from page 2*

*CBDL Board Chair Orman Johnson.*

*Ecology's Office of the Columbia River Director Tom Tebb.*

CBDL Board Chair, ECBID Board member, and area landowner Orman Johnson highlighted the success of the public private partnership that makes these landmark milestones possible. The impact and importance of continued collaboration and CBP development cannot be undervalued.

"We're making water available to cities, industries and farmers from the Canadian border to the Oregon border, while protecting water in tributaries where salmon migrate and spawn, and restoring floodplains and the natural environment," said Tom Tebb, Director of Ecology's Office of Columbia River. "It's been a tremendous journey, but there's much more to achieve. We're looking to the future and what our water supplies will be in the face of climate change and how we may adapt."

*CBDL Government Relations Director Mike Schwisow and Representative Mary Dye.*

CBDL: No Board Meeting in August

Wednesday, September 21, 2016, 4:00 PM – 6:00 PM  
CBDL Board Meeting  
Simplot, Moses Lake

### QUOTE OF THE MONTH

*"The difference between a successful person and others is not a lack of strength, not a lack of knowledge, but rather a lack of will."*

*- Vince Lombardi, Football Coach*

## OGWRP Partners Celebrate Lind Coulee Siphon Complex Completion *Continued from page 3*

*View of ECBID Manager Craig Simpson standing inside the Lind Coulee test section.*

Both siphons have a 14'8" inside diameter and have water capacity of around 3,310 cubic feet per second. Lind Coulee Siphon Number 1 is 1,885 linear feet with over 800,000 pounds of steel for reinforcing and 6,302 cubic yards of concrete. Lind Coulee Siphon Number 2 is 2,598 linear feet with over 1,669,300 pounds of steel reinforcing and 8,703 cubic yards of concrete. The siphons expand the water delivery capacity of East Low Canal, the source of water for OGWRP.

*Attendees hear from dignitaries at the Lind Coulee Complex Celebration.*

"Today beautifully illustrates how together we can achieve water solutions for farmers and growing communities, and benefit the natural environment. Through these siphons we will deliver water to farmers who need it; to support a \$1.5 billion agricultural industry; to put good food on our tables, and protect a precious aquifer that has dropped by as much as 200 feet since 1980" said Washington State Department of Ecology Director Maia Bellon. She also gave "a shout-out to the Columbia Basin Development League for their ongoing dedication to economic vitality."

*Representative Tom Dent talks with CBDL Board member and area landowner Alice Parker.*

*CBDL Board member and area landowner Alice Parker, Senator Judy Warnick, and Ecology Director Maia Bellon.*

*Ecology Director Maia Bellon, Representative Mary Dye, Senator Judy Warnick, WSDA Director Derek Sandison, and Representative Tom Dent.*

## OGWRP – A Series of Milestones

*Mike Schwisow, CBDL Director of Government Relations*

The Odessa Ground Water Replacement Program (OGWRP) is unlike other major construction projects currently underway in Washington. For projects like the new floating bridge over Lake Washington or tunnel under Seattle, we wait until it is all done for the grand ribbon cutting that opens the facility to the public. The OGWRP, in progress since 2005, mirrors the development of the original Columbia Basin Project (CBP) which celebrated a series of milestones and accomplishments- gradually extending the development of irrigated acreage in the Project.

This month, two major milestones within the CBP marked the continued progress in the work to bring secure, CBP water supplies to ground-water irrigating landowners who are watching their water supply decline.

At the Lind Coulee Siphon Celebration, legislators, officials, irrigation district staff, landowners, and members of the public, over 50 total, gathered to recognize completion of the two siphons. This major infrastructure is the largest single element of the East Low Canal expansion project. It was funded, in part, by a \$26 million grant provided to East Columbia Basin Irrigation District (ECBID) in 2013. The Legislature appropriated the funds through Ecology's Office of Columbia River. ECBID and construction contractor, Rotschy, Inc., completed the project on-time and under budget. This was a significant milestone worth recognizing. Completion of the Lind Coulee Siphons makes the East Low Canal fully operational for delivery of surface water to four northern OGWRP systems through the increase of canal-carrying capacity and operational security. These four systems are a part of seven anticipated water delivery systems in OGWRP.

Now OGWRP partners will focus on the remaining work needed to make water available in all seven systems. Finding funding for three more siphons, control structures, and county road bridges are next on the agenda.

The second significant milestone was when ECBID Directors approved a resolution authorizing the sale of bonds to finance the construction of the initial pump station/pipeline distribution system. Landowners who will be served by the EL 47.5 system signed up 8,204 acres to receive CBP water through the ECBID-constructed system. This marks a significant step in the distribution system construction phase of the CBP. Much work remains to be done in this phase as well. Not all of the eligible landowners in the 47.5 service area were able to make the repayment cost work for their farm budgets. Federal government policy related to irrigation development has changed significantly since the CBP was originally built. Fifty-year repayment at next-to-nothing interest rates are a thing of the past. Today, landowners can expect to share in a higher cost for access to secure CBP water supplies, but the amount and terms must be such that they can also survive economically.

The public benefit of maintaining the economy and jobs in the region and the preservation of the remaining aquifer for other uses are important factors for "big picture" consideration. Additional public investment is necessary to enable full landowner participation and a fair distribution of costs and benefits.

These two milestones are significant. OGWRP water is being delivered. Now we are well on our way to seeing OGWRP completion.

## ECBID Landowner Meetings Maintain Momentum

*Mike Schwisow, CBDL Director of Government Relations*

East Columbia Basin Irrigation District (ECBID) has completed a round of well-attended meetings for landowners who are eligible to receive Columbia Basin Project (CBP) ground water replacement supplies. Separate meetings were held for each of the six anticipated systems that follow development of the initial system (EL 47.5) .

These meetings are to get timely information to landowners, and share lessons learned to date, ultimately improving the development process moving forward.

At each meeting, landowners heard the status on East Low Canal improvements including a report on the water delivery made possible through the completion of the Lind Coulee Siphons. Remaining OGWRP work was identified and plans were outlined to reach completion.

The status of the first water delivery system to be built, EL 47.5, was reviewed. The process of working with landowners to settle on final designs and the outcome of the landowner signup process for repayment contracts was outlined. 8,204 acres of land have been contracted and the ECBID Board approved a resolution to authorize a bond sale to finance system construction.

Information was provided on the status of ECBID's work with the US Bureau of Reclamation (USBR) to amend the Master Water Service Contract. The Master Water Service Contract authorizes ECBID to contract with landowners for delivery of water--for which USBR has secured a secondary use permit. The amendment will allow ECBID to offer contracts on the largest portion of the most recent three-part water supply including 7,700 acres derived from the Lake Roosevelt Incremental Releases Program and 70,000 acres associated with the Odessa Subarea Special Study. Amending the contract is complicated and required several baseline studies to be completed before actual negotiations could begin.

Details of the landowner water service contract were laid out and copies of the contract were available for review. Other contract-related topics included the ability to prepay the contract, superseding status of the underlying ground water right, how the seasonal change in place of

## ECBID Landowner Meetings

### Maintain Momentum *Continued from page 5*

use will work, and details on non-district systems.

Development of the EL 47.5 system has provided a template for both landowners and ECBID going forward on the other proposed systems. The experience gained is being shared with landowners on other systems to better facilitate the process. Eligibility to receive ground water replacement supplies depends on several factors:

- ✓ the ground water right itself
- ✓ inclusion of the land in the CBP and
- ✓ having an appropriate land classification

But, many deep well irrigators have never had to determine eligibility. They are learning, for the first time, who all the players are and each player's role in water delivery. At the meetings, landowners were advised to determine their land's eligibility since that can be a lengthy process through USBR. Landowners considering water right place of use transfers were encouraged to contact the Department of Ecology. Several EL 47.5 landowners had completed such transfers to move eligible distant rights closer to the East Low Canal and learned that it takes some time to get the administrative paperwork done.

## Help CBDL Honor Key Project Leaders

Help CBDL honor the leaders and influencers who have demonstrated steadfast commitment and played significant roles in Columbia Basin Project development! Nominations are being sought for awards. Selected recipients will be announced at the CBDL Conference on November 3. Nomination forms are available at [www.cbdl.org](http://www.cbdl.org) and must be submitted by September 9.

### *Perseverance Award*

Perseverance is the ability to carry on until you complete the task regardless of how hard it may seem. Recipients of this award demonstrate the ability to fight on no matter the odds.

#### *Past Recipients:*

- 2015 Art Prior, Othello
- 2012 Alice Parker, Royal City

### *Honorary Life Member*

Honorary life members have demonstrated their support of the Columbia Basin Project and its future development with tireless and significant dedication to efforts that advance the Project..

#### *Past Recipients:*

## 2016 CBDL Conference Planning Continues

The League is bringing together an excellent line up of speakers and topics for the 2016 Conference set for Thursday, November 3 at Big Bend Community College in Moses Lake. Each year the conference attracts around 150 Columbia Basin Project landowners, leaders, politicians, decision makers, and stakeholders to network, hear updates, learn about current issues, and share information.

### *General Conference Schedule – Registration opening soon!*

- |          |  |
|----------|--|
| 12:15 PM | Check – In                               |
| 1:00 PM  | Program                                  |
| 5:00 PM  | Reception                                |
| 6:00 PM  | Dinner                                   |
| 6:45 PM  | Annual Meeting Featuring Keynote Speaker |

Gain unique industry exposure for your company and support the continued development of the Project through Conference sponsorship. Sponsorships are available at a variety of levels and offer opportunities for onsite signage, ads in the program, recognition from the stage, and more. Check out [www.cbdl.org](http://www.cbdl.org) or contact Kate Taylor, [ktaylor@cbdl.org](mailto:ktaylor@cbdl.org) for information.

## Action on Ag and Infrastructure Sends Congress into August Recess

Ian Lyle, *Water Strategies LLC*

Earlier this month, Congress passed S.764 bill, just prior to breaking for August recess. This legislation will establish a national framework for the labeling of Genetically Modified Organisms or GMO foods. The bill aims to provide consumers with information about food products and to avoid a state-by-state patchwork of requirements that would make compliance difficult for producers. Senator Pat Roberts (R-KS) and Senator Debbie Stabenow (D-MI), the Chair and Ranking Member of the Senate Agriculture Committee, authored the bill. A Vermont law requiring GMO labeling that went into effect on July 1, 2016 spurred the efforts to pass a federal standard that would provide a uniform playing field for compliance. The bill would direct a rulemaking process for developing a national GMO labeling standard, providing the opportunity for public comment, and would require disclosure if a product is a GMO. A majority of foods contain GMOs, the FDA has found that GMO products are just as safe as non-GMO products.

S.764 passed the U.S. Senate July 7 and both Senator Patty Murray (D-WA) and Senator Maria Cantwell (D-WA) voted against the bill. The House passed S.764 on July 14. Congressman Dan Newhouse (R-WA) and Congresswoman Cathy McMorris Rodgers (R-WA) voted in favor of S.764. The bill will now head to the President for his signature. President Obama has indicated that he will sign S.764 into law.

On July 14, the House of Representatives also passed H.R. 5538, the Department of the Interior, Environment and Related Agencies Appropriations Act. This legislation allocates funding to a number of federal agencies including some of the operations at the Department of the Interior. H.R. 5538 contained a number of policy requirements, known as riders, which are aimed at addressing regulatory concerns. One of the riders included would prohibit the EPA from moving forward with its pending “waters of the United States” rule. Another rider, found in Section 433 is similar to the Water Rights Protection Act and would prohibit federal agencies from making the approval of a permit or other land use or occupancy agreement contingent on the transfer of any water right.

H.R. 5538 will now be referred to the Senate for further action. However, it is unlikely that it will proceed in the Senate in its current form. On July 11, the White House issued a Statement of Administration Policy indicating that the President would veto H.R. 5538 in its present form. This, in combination with the short legislative calendar, makes it likely that Congress will fund the operation of the federal government via a continuing resolution or an omnibus appropriations bill.

## CBDL Looking to Expand Board Representation

The Board of Trustees is the chief elected and appointed body of the League. The board represents the community interest in the League and board members are expected to generally and enthusiastically participate as part of the board team to accomplish the League’s mission: to support the future development of the Columbia Basin Project.

Board members regularly attend board meetings, share wisdom and insights in board decision-making, contribute community knowledge, serve as a community advocate, share expertise, and continually seek to learn more about the CBP and related issues.

CBDL Board elections will be held during the Annual Meeting at the 2016 Conference on November 3. CBDL is looking to add new board members from unrepresented areas of the Columbia Basin including Wahluke Slope and Mattawa. If you are interested in serving as a CBDL Board member, please contact Kate Taylor, ktaylor@cbdl.org or 509-782-9442. for information.
